The Thesis Abstract is written here (and usually kept to just this page). The page is kept centered vertically so can expand into the blank space above the title too. . .

Acknowledgements

We wish to express our sincere gratitude to Mr. Nirmal Kumar, our OOP Instructor for providing us the opportunity to work on the project named DEVELOPER PROFILE MANAGEMENT SYSTEM and helping us with our doubts, without whom this project would not have come forth.

We also, would like to thank our friends and colleagues for providing the necessary support and advice....

Chapter 1

Introduction

In this project, we aim to design a Developer Profile Management System where it acts as a constant link between potential developers across the users and the recruiters looking for certain skills. It is a wide platform to interact with recruiters, scroll for the optimum opportunities and keep oneself updated about the current technological trends and advancements in the skill requirements by the recruiters.

1.1 Scope

The need was felt for such a hierarchy as there is less availability of exposure to developers as they are people behind the screen. We aim to provide an open interactive platform for the same. The project has wide scope as with increasing technology dependency, recruiters and developers both tend to look for best possible alternates virtually rather than on-field searching. Also it helps cut time consumption for projects which need immediate developers to work upon it. Also it will help multi-national organizations to reach the best professionals easily.

Chapter 2

Recruiters

Our project, the Developer Profile Management System keeps track of the profile of the developers be it skills, work experience, etc. Now all that information would be valuable to the recruiters, so there must be an efficient way for them to get the information they want easily and in the format that is most suited for them. So, this module of the project would cater to the needs of the recruiters.

2.1   Details

This class would hold the information about the recruiters and would have the following attributes.

2.1.1   Name

2.1.2   Company Name

2.1.3   Position

2.1.4   Feild

2.1.5   Location

2.2   Queries

This class of the module would house the methods responsible to perform the search operation on the database. They would be responsible for returning the results based

on one or more constraints.
